Mostafa Khalaf Mohamed

Full-Stack Software Engineer | Laravel | Vue | Multi-Tenant SaaS

Phone: +20 115 347 0446 **Email:** mostafkhalaf11@gmail.com **Location:** Cairo, Egypt
GitHub: github.com/mostafakhalaf11 **LinkedIn:** linkedin.com/in/mostafa-khalaf-3b003621a

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 2+ years of experience building multi-tenant SaaS platforms in Laravel and Vue. Lead engineer on a modular HRM/Payroll ERP, owning its tenancy architecture, attendance and payroll engines and authorization layers, and now the versioned API behind its employee mobile and desktop apps. Sole architect of a bilingual B2B commerce platform on Laravel 13 and Nuxt 4, running in Cloudflare-protected staging ahead of launch. Strong in domain modeling, policy-driven business engines, data migration under production constraints, and API design that stays maintainable as systems grow. Comfortable owning delivery from schema design through CI/CD, deployment and backups.

TECHNICAL SKILLS

Backend & Architecture: PHP 8.1-8.5, Laravel 10/13, Filament, RESTful APIs, OpenAPI, Laravel Sanctum, OOP, SOLID, design patterns (strategy, factory, state machine), modular monolith and domain-driven design, service/action layers, DTOs, events and listeners, queues, jobs and schedulers, multi-tenancy, RBAC and ABAC authorization, policy-driven rule engines.

Data & Infrastructure: MySQL 8, Redis, Eloquent ORM, query optimization and indexing, schema and data migrations, backfill and reconciliation strategies, Docker and Docker Compose, GitHub Actions CI/CD, Nginx, Linux VPS (OVH, Hostinger), Cloudflare, SSH, deployment and release management, backup and restore.

Testing & Quality: PHPUnit, PHPStan/Larastan static analysis, Laravel Pint, code review, Git and GitHub, technical documentation, API contract validation in CI.

Frontend: Nuxt 4, Vue 3, TypeScript, Blade, Alpine.js, TailwindCSS, JavaScript, HTML5, CSS3, i18n and RTL localization, DataTables, Figma.

AI-Assisted Engineering: Claude Code, custom agent skills and project conventions, MCP server integration, specification-driven delivery in Notion.

PROFESSIONAL EXPERIENCE

Full-Stack Developer
Jul 2025 - Present

78sWorks | Giza, Egypt | Enterprise HR and ERP software

- Led delivery of the company multi-tenant HRM/Payroll ERP, authoring ~1,320 of 1,900 commits in 15 months.
- Designed the tenancy backbone (User > Membership > Company > Workspace) and migrated ~40 legacy global tables to company-scoped ownership using forward-only scripts and reconciliation dry-runs, with zero data loss.
- Re-architected a monolithic codebase into 9 feature modules with thin controllers, service layers and shared domain engines, removing duplicated business logic.
- Engineered 3 authorization layers: RBAC permissions, ABAC query scoping with integrity checks, and a conditional-access engine on IP, country and time windows, with every decision audited.
- Hardened authentication with device and IP risk scoring over HMAC-hashed fingerprints, 30-minute signed confirm/report links, account lockdown and session revocation.
- Building the versioned /api/v1 behind the ERP employee mobile and desktop apps: one JSON error shape, device binding, app attestation, push notifications and idempotent clock-in/out.
- Led the first client production cut-over for a 53-employee tenant, covering rehearsal runbook, pre-cut-over checklist and legacy payslip parity verification.
- Authored the engineering conventions and reusable delivery skills the team codes against, driving specification-first delivery across a 600-task board.

Backend Developer (Freelance)
May 2025 - Jul 2025

KapyApp | Cairo, Egypt | Online food delivery platform

- Shipped a complete restaurant delivery platform in Laravel in under 3 months, covering ordering, delivery tracking and authenticated REST APIs.
- Automated deployment on Hostinger with GitHub auto-deploy and CI/CD, cutting release effort to a single push.
- Diagnosed and fixed production issues across image storage, mail delivery and configuration caching.

Backend Developer
Sep 2024 - Apr 2025

TryOrder | Riyadh, Saudi Arabia | Online food delivery platform

- Maintained and debugged CRUD operations across Laravel REST APIs and cleared escalated technical support tickets.

ERP End-User Specialist

Jun 2023 - Sep 2024

KB-Denim | Cairo, Egypt | Denim manufacturing

- Streamlined invoice processing in Microsoft Dynamics ERP, cutting handling time 30% (10 to 7 minutes per invoice).
- Raised data-entry accuracy 15% through workflow improvements and removed 5 hours of manual reporting per week.

KEY PROJECTS

AMG ERP - Multi-Tenant HRM and Payroll Platform

Modular Laravel ERP covering the full employee lifecycle across 9 feature modules, now extending to employee mobile and desktop apps | erp.amgeca.com

- **Attendance rule engine:** 5 pluggable rule domains (late, absence, holiday work, rest-day work, hours shortfall) that auto-emit penalties, compensations and payroll adjustments.
- **Shift management:** fixed and flexible templates, multi-week rotations, bulk overrides and swaps behind one shared resolution service, eliminating false absences for 53 rostered employees.
- **Payroll pipeline:** staged adjustments > payroll runs > payslips, with an Egyptian statutory layer (pre/post-tax phases, treatment codes, exemptions) and a per-payslip audit trail.
- **Leave engine:** versioned policies with gap detection, a schema-driven rule editor, accrual and proration strategies, and a consumption ledger for partial releases.
- **Notification engine:** asynchronous delivery across 2 channels with per-attempt logging, digests, storm control and validated template variables.
- **Reporting and automation:** CSV/XLSX and headless-PDF exports, scheduled background jobs, and 18 admin-managed interface languages including Arabic and Hebrew RTL.

Stock Yard - Bilingual B2B Commerce and RFQ Platform (Freelance)

Jul 2026 - Present

Sole architect and developer: Laravel 13 API, Filament 5 operator panel, Nuxt 4 SSR storefront | stock-yard.com

- Architected a domain-driven modular monolith across 12 domains where Actions own transaction boundaries and providers sit behind application-owned contracts, keeping shipping, search and storage swappable.
- Delivered a contract-first OpenAPI v1 across 47 paths, validated in CI on every push and backed by 190+ PHPUnit tests with Larastan level 6 and Pint.
- Implemented identity and access with email OTP (hashing, expiry, throttling, replay prevention), Google OAuth and TOTP MFA with encrypted recovery codes.
- Modeled catalog and inventory on transactional stock aggregates over an append-only ledger, with integer minor-unit money and ULID public identifiers; checkout with delivery or branch pickup releases or consumes reserved stock exactly once through guarded status transitions.
- Owned delivery end to end: Dockerized local stack, staging on an OVH VPS behind a Cloudflare Tunnel (no public origin ports) with Cloudflare Access in front, automatic deploys from main across 9 GitHub Actions workflows, and nightly encrypted database backups to Cloudflare R2.

EDUCATION

Bachelor of Computer Science

Sep 2016 - Jun 2022

Assiut University, Assiut, Egypt

CERTIFICATIONS

Open-Source Web Development (Laravel), Information Technology Institute (ITI) | **Laravel Development Internship**, TryOrder | **Complete Flutter and Dart Development**, Udemy

LANGUAGES & ADDITIONAL STRENGTHS

Languages: Arabic (native), English (professional), German (basic).

Strengths: Problem diagnosis and troubleshooting across Laravel and server-side systems, technical documentation and specification writing, sprint-based Agile delivery, cross-functional collaboration, independent learning, ownership of outcomes.
